SUMMARY

Senior software engineer with 5+ years shipping full-stack, mobile, and applied AI products. Most recently fintech and crypto: wallets, payments, two apps on the stores, plus AI systems in production. I work across React, Next.js, and React Native on the front. Node.js, NestJS, and PostgreSQL on the back.

EXPERIENCE

Senior Mobile Developer

05/2025 – Present

Lipaworld, Delaware, USA (Remote)

- Built and shipped a stablecoin wallet app to both the App Store and Play Store, covering Solana and Base wallet creation, onramp/offramp, and full wallet lifecycle management, with features now processing over \$250K in monthly onramp/offramp transaction volume.
- Implemented virtual multi-currency bank account creation (USD, EUR, GBP) and virtual card flows, enabling users across African and European markets to hold and spend fiat from a single app.
- Developed P2P transfer functionality and an in-app voucher marketplace, broadening the platform's utility into peer payments and digital commerce.
- Integrated KYC verification, third-party payment SDKs, Firebase push notifications, and in-app support tooling, delivering a seamless end-to-end experience from signup to first transaction.
- Migrated the codebase from bare React Native to Expo, enabling OTA updates; upgraded the Android target SDK and realigned native libraries to 16KB memory page boundaries for full Google Play compliance ahead of the Android 15+ deadline.

Frontend & Mobile Engineer

08/2024 – 05/2025

Titan Payment Systems, Tema, Ghana

- Built MyCashBox from scratch, a mobile money and bank transfer app for West Africa, and shipped it to both the Play Store and App Store, expanding the platform's reach across multiple markets.
- Designed the complete Redux state architecture for authentication and all transaction flows, and managed server state with React Query, resulting in a stable and predictable data layer.
- Upgraded the Android target SDK and realigned native libraries to 16KB memory page boundaries, ensuring full Google Play compliance with the Android 15+ policy.
- Built the MyCashBox marketing landing page in Next.js, enabling the team to capture and manage a waitlist of prospective users ahead of launch.

Software Engineer

08/2023 – 07/2024

Thrillers Travels, Lagos, Nigeria

- Led development of a full flight and hotel booking system, integrating the Tequila (Kiwi) flight API and RateHawk hotel API end-to-end.
- Implemented role-based live audio rooms (host, co-host, speaker, listener) with mic-permission management using React Video SDK, enabling interactive events on the social platform.
- Rebuilt the visa application UI in Next.js, directly contributing to 1,000+ user signups and successful visa applications processed through the platform.
- Managed the team's Git workflow, led code reviews, and coordinated across design, backend, and product to keep delivery on track.

Software Engineer

03/2021 – 07/2023

Joovlin, Lagos, Nigeria

- Designed and built backend infrastructure from scratch, including REST APIs, WebSocket channels, and GraphQL endpoints, powering a social-commerce platform that grew past 4,000 merchant signups.
- Developed the merchant-facing React + Redux dashboard tied directly to platform growth; contributed to the Flutter app (BLoC) shipped to both stores.
- Wrote comprehensive unit and e2e tests across a rapidly growing codebase; delivered 6+ additional web applications using various JS frameworks.
- Collaborated across frontend, backend, and mobile tracks, as one of few engineers contributing meaningfully to all three layers of the product.

Frontend Engineer

06/2020 – 11/2020

Full Power Webs, India (Remote)

- Refactored the main product UI with React + TypeScript, achieving a 98% Lighthouse performance score.
- Resolved critical frontend bugs with a 90% ticket resolution rate, significantly reducing the backlog inherited from the previous team.

PROJECTS

VisaRoom – Full-Stack / Voice AI • [visaroom.co](#)2026 – Present

Voice rehearsal for visa interviews. An officer asks real questions for your track; you answer out loud, under time. Catches where answers contradict – before the window does.

Next.js • TypeScript • Node.js • OpenAI • Deepgram • Drizzle • PostgreSQL • Flutterwave • AWS

Classwyz (CampusTutor) – Full-Stack / AI Engineer01/2026 – Present

- Built a multi-tenant, WhatsApp-first AI tutoring platform for Nigerian university students, using RAG so answers stay strictly grounded in each course’s uploaded materials rather than general LLM knowledge.
- Architected the backend on Node.js, TypeScript, Fastify, Prisma, and PostgreSQL, with a document ingestion pipeline (PDF/DOCX/PPTX/images → S3 → OCR → chunking → embeddings) feeding course-scoped vector search on Supabase/pgvector.
- Designed conversation orchestration with LLM intent classification and a Postgres session state machine; added voice tutoring via Whisper STT/TTS over Twilio WhatsApp, a Next.js 14 admin dashboard, and Flutterwave subscription billing.

Ridemate – Backend Engineer05/2024 – Present

Built the backend for a ride-sharing app matching passengers by proximity and shared route using Node.js, PostgreSQL, PostGIS, TypeORM, and Twilio; deployed on Heroku.

SKILLS

Frontend & Mobile: React.js, Next.js, Vue.js, Nuxt.js, React Native, Flutter – TypeScript, JavaScript, HTML/CSS, SCSS

Backend & Data: Node.js, NestJS, Fastify, GraphQL, REST, WebSockets, TypeORM, Prisma – PostgreSQL, PostGIS, MySQL, Firebase, MongoDB, Supabase/pgvector

AI & Messaging: OpenAI (GPT-4o-mini, Embeddings, Whisper) – RAG / Vector Search – Twilio WhatsApp API – Flutterwave

Tooling & State: Redux, Zustand, Vuex, React Query – Expo, Git, Jest, Tailwind CSS, Material UI, Chakra UI, Heroku, Railway, GitHub Actions, Resend

EDUCATION

BSc, Electrical & Electronics Engineering
University of Lagos, Nigeria • 2nd Class Upper (3.59 / 5.0)

PUBLICATIONS

Complete Guide to Setting up Git SSH Protocol on Mac OS (GitLab & GitHub) – Medium, 2023

HONOURS & AWARDS

AWS Certified Solutions Architect Course • Udemy • Jul 2026

The Complete Node.js Developer Course (3rd Edition) • Udemy • Mar 2024

Scrum Developer Certification • Udemy • Apr 2022

IELTS • British Council • Band 8.0 (CEFR C1) • Mar 2025
